

### 3<sup>rd</sup> Term: Objectives checklist VI

Contents	What we'll learn: main goals	How much do I know			What I need to review and how
		Understand completely	Need review	Didn't understand	
Variation & Classification	Classify animals and plants into major groups and name the five kingdoms of life.				
	Understand what is meant by a species.				
	Investigate variation within a species.				
	Identify characteristics that are inherited and/or caused by environmental factors.				
	Suggest reasons why differences and similarities exist within families.				
	Describe how organisms are adapted to their habitat.				
	Explain what is meant by a habitat.				
	Group living things according to their feeding relationships: green plants or fungi, herbivores, omnivores, carnivores.				
	Draw and model simple food chains and food webs.				
	Group living things according to their position in the food chain: producer, primary consumer, secondary consumer, omnivore, herbivore, carnivore.				
	Understand that food is used for growth and energy so the direction of the passage of energy goes from producer to primary consumer to secondary consumer.				
	Describe how organisms are adapted to their habitat and how adaptations are based on survival: food, water, shelter, protection from predation.
